The Big Bang theory is the prevailing cosmological model for the observable universe from the earliest known periods through its subsequent large-scale evolution. The model describes how the universe expanded from a very high-density and high-temperature state, and offers a comprehensive explanation for a broad range of phenomena, including the abundance of light elements, the cosmic microwave ...

Big Bang - Wikipedia

The Big Bang is a scientific theory about how the universe started, and then made the stars and galaxies we see today.. The universe began as a very hot, small, and dense superforce (the mix of the four fundamental forces), with no stars, atoms, form, or structure (called a "singularity"). Then about 13.8 billion years ago, space expanded very quickly (thus the name "Big Bang").

In physical cosmology, Big Bang nucleosynthesis (abbreviated BBN, also known as primordial nucleosynthesis, arch(a)eonucleosynthesis, archonucleosynthesis, protonucleosynthesis and pal(a)eonucleosynthesis) refers to the production of nuclei other than those of the lightest isotope of hydrogen (hydrogen-1, ^1H , having a single proton as a nucleus) during the early phases of the Universe.

Big Bang nucleosynthesis - Wikipedia

The Big Bang is a naturalistic story about the origin and development of the universe (e.g. a cosmology), beginning with a "singularity" when all mass, energy, and space was contained in a small point.

In this approach individual modules are not integrated until and unless all the modules are ready. In Big Bang integration testing all the modules are integrated without performing any integration testing and then it's executed to know whether all the integrated modules are working fine or not.; This approach is generally executed by those developers who follows the "Run it and see ...

This is an artist's concept of the metric expansion of space, where space (including hypothetical non-observable portions of the universe) is represented at each time by the circular sections.

No Big Bang? Quantum equation predicts universe has no

For Paul Steinhardt and Neil Turok, the Big Bang ended on a summer day in 1999 in Cambridge, England. Sitting together at a conference they had organized, called "A School on Connecting Fundamental Physics and Cosmology," the two physicists suddenly hit on the same idea. Maybe science was finally ready to tackle the mystery of what made the Big Bang go bang.
