The Pentium III has improved MMX and processor serial number feature. The improved MMX enables advanced imaging, 3D streaming audio and video, and speech recognition for enhanced Internet facility. Pentium-IV with 42 million transistors and 1.5 GHz clock speed was released by Intel in November 2000. The Pentium 4 processor has a system bus with ...

industry. The original 8088 processor used in the first PC contained close to 30,000 transistors and ran at less than 5MHz. Intel recently introduced a version of the Pentium III Xeon with 2MB of on-die cache that has a whopping 140 million transistors, the largest ever in a single processor chip. Both

Instruction Set of 8085 An instruction is a binary pattern designed inside a microprocessor to perform a specific function. The entire group of instructions that a microprocessor supports is called Instruction Set. 8085 has 246 instructions. Each instruction is represented by an 8-bit binary value.
