MR angiography is a noninvasive technique for vascular imaging and is thus widely used to screen for cerebrovascular lesions, including asymptomatic unruptured cerebral aneurysms. Infundibular dilation is often detected at branching sites of the posterior communicating and anterior choroidal arteries from the internal carotid artery, and this needs to be differentiated from an aneurysm.

Differential Diagnosis of the Infundibular Dilation and

The MR Imaging Era. Cranial and spinal MR imaging revealed a broad spectrum of changes in patients with MPS. The most prominent brain features, in almost all types of the disease, are white and gray matter changes, ventriculomegaly and hydrocephalus, cortical atrophy, and enlargement of the PVS, while in spinal neuroimaging, canal stenosis, cord compression, and myelopathy are usually present.

Magnetic resonance imaging (MRI) is a medical imaging technique used in radiology to form pictures of the anatomy and the physiological processes of the body in both health and disease. MRI scanners use strong magnetic fields, magnetic field gradients, and radio waves to generate images of the organs in the body. MRI does not involve X-rays or the use of ionizing radiation, which distinguishes ...

Abstract. Nanomaterials offer new opportunities for cancer diagnosis and treatment. Multifunctional nanoparticles harboring various functions including targeting, imaging, therapy, and etc have been intensively studied aiming to overcome limitations associated with conventional cancer diagnosis and therapy.
