where $V; k$ is a learnable linear projection, and the vector $V; k; h$ is broadcast over the time dimension. For local conditioning we have a second timeseries $h; t$, possibly with a lower sampling frequency than the audio signal, e.g. linguistic features in a TTS model.

Definition. A non-degenerate distribution is a stable distribution if it satisfies the following property: Let X_1 and X_2 be independent copies of a random variable X . Then X is said to be stable if for any constants $a > 0$ and $b > 0$ the random variable $aX_1 + bX_2$ has the same distribution as $cX + d$ for some constants $c > 0$ and d . The distribution is said to be strictly stable if this holds ...

Definition Standard normal distribution. The simplest case of a normal distribution is known as the standard normal distribution. This is a special case when $\mu = 0$ and $\sigma = 1$, and it is described by this probability density function: $f(x) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{x^2}{2\sigma^2}}$. The factor $\frac{1}{\sigma\sqrt{2\pi}}$ in this expression ensures that the total area under the curve $f(x)$ is equal to one. The factor $\frac{1}{\sigma}$ in the exponent ensures that the distribution has unit ...
