Topology (from Greek topos [place/location] and logos [discourse/reason/logic]) can be viewed as the study of continuous functions, also known as maps. Let X and Y be sets, and $f: X \rightarrow Y$

Lecture Notes on Topology for MAT3500/4500 following J. R

To paraphrase a comment in the introduction to a classic point-set topology text, this book might have been titled What Every Young Topologist Should Know. It grew from lecture notes we wrote while teaching second-year algebraic topology at Indiana University. The amount of algebraic topology a student of topology must learn can be intimidating.

Lecture Notes in Algebraic Topology

Introductory topics of point-set and algebraic topology are covered in a series of five chapters. Foreword (for the random person stumbling upon this document) What you are looking at, my random reader, is not a topology textbook. It is not the lecture notes of my topology class either, but rather my student's free interpretation of it. Well, I

Lecture 1 Notes on algebraic topology $\mathbb{E}^1 \times \mathbb{O} X$ is the set of path components. (It is the set of maps out of S^0 ,
which is a point, so choosing an element of $\mathbb{E}^1 \times \mathbb{O} X$ amounts to choosing a destination for this point. Two maps
are equivalent if their destination points are path-connected.)
