Healthy marine species like whales, sea turtles, coral, and salmon are important for maintaining balanced and thriving ocean ecosystems. We work to prevent marine species populations from decline and extinction, protect them from human activities, and monitor activities that might impact them so they are around for future generations.

Protecting Marine Life | NOAA Fisheries

1. Dolphins belong to the toothed whale group whereas blue whales, fin whales, and humpback whales belong to the other category. 2. Blue whales, which are the largest of all whales, have a length of 80 to 100 feet whereas dolphins come in lengths of 6 to 12 feet.

Difference Between Dolphins and Whales | Difference Between

inshore bottlenose dolphins (n=44), spotted dolphins (28) and humpback whales (17) were gathered in 35 surveys along the inner basin and the sill area to account for 89 sightings throughout 2016. Regarding objective 1 (To identify areas of critical importance to dolphins such as foraging areas,
